

virtually **painless**  
wrinkle reduction

A safe and gentle approach  
to turning back time.

Wrinkles come with life—years of  
laughing, frowning or too much time  
in the sun. Natural consequences of  
aging, wrinkles can make us look  
and feel older than we would like.

**Aluma™**

revolutionary treatment  
for wrinkles, fine lines  
and skin laxity

**skinrenewal**  
with FACES™ technology

## about Aluma treatments

Aluma skin renewal treatments turn back the clock and gently reverse the aging process. This revolutionary technique delivers energy safely and comfortably to the underlying layers of the skin, gently stimulating the production of new collagen, while protecting the outer layer of the skin. The new collagen that is formed plumps and smooths the skin, making it appear more youthful.

## benefits of Aluma treatment

- virtually painless
- minimal risk
- no downtime; return to normal activities immediately
- reduces fine lines and wrinkles
- tightens the skin
- improves aged and sun damaged skin
- stimulates new collagen growth within the dermis.

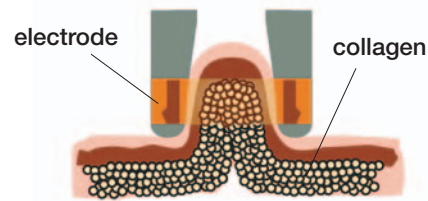

## who can be treated?

Aluma energy is not affected by skin tone, hair color or any other characteristic. Anyone wanting to treat mild-to-moderate wrinkles and achieve smoother skin can be treated.

## what can you expect?

Aluma treatment is comfortable. A revolutionary technology called **FACES™** (Functional Aspiration Controlled Electrothermal Stimulation) results in energy deposited deep in the skin without affecting the skin's surface and virtually without pain. Skin is gently drawn into the tip of the handpiece. Energy is delivered resulting in a gentle warming of the deeper layers of the skin.

**Vacuum-assisted tip:** Revolutionary FACES technology uses a vacuum process to gently deliver energy to deeper layers of the skin.

A treatment typically takes only about 15 minutes, and you can return to normal activities immediately.

A series of treatments are recommended for best results. Fine lines are reduced and skin is tightened as new collagen is deposited in the dermis. Although some improvement will be seen within a month to a few months, the skin should continue to improve for several months after treatment as new collagen is generated.

## is the procedure safe?

Risks are very minimal. The specific risks and the suitability of this procedure for a given individual can be determined only at the time of consultation. All procedures have some degree of risk.

## does it hurt?

Although most patients report a gentle warming sensation, discomfort, even mild discomfort, is rare.
